

Electronic Laboratory Notebook

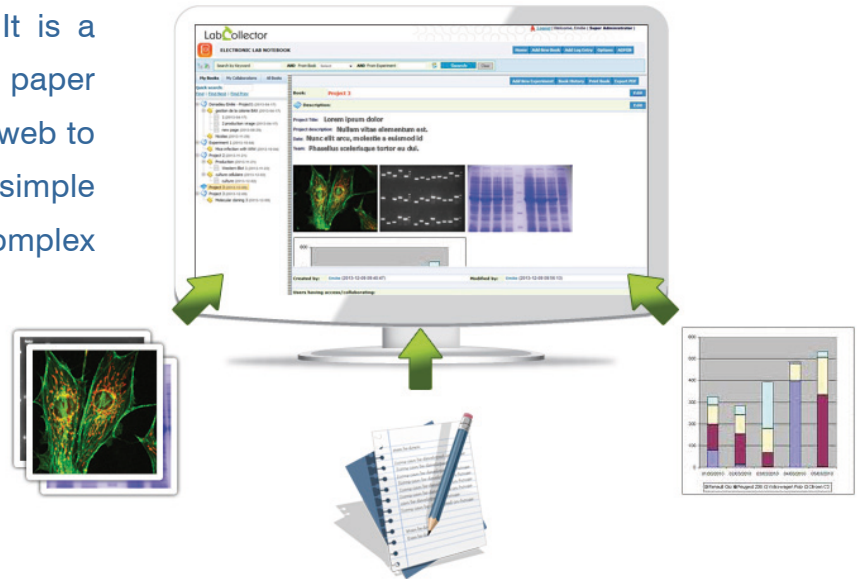

LabCollector LIMS Add-on

An easy application for experimental reporting and sharing

The Electronic Lab Notebook add-on for LabCollector is an efficient and simple notebook to store and manage lab experiments. It is a great support/complement to the lab paper books as it benefits from the network or web to bring agility to all lab staff. From simple experiment documentation to routine complex records involving workflow and page templates, your lab can find or define their specific needs through extensive customization.

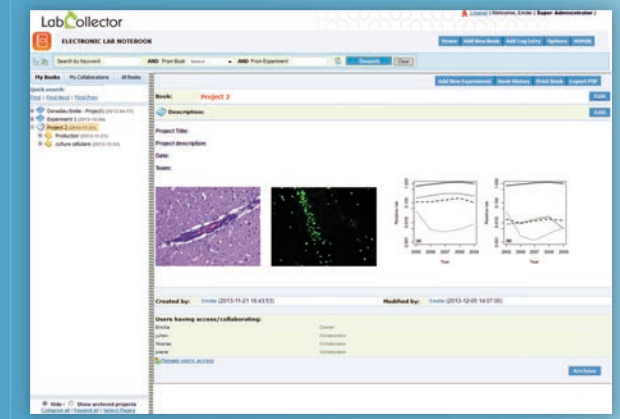

Collaborative ELN

Integrated functions:

- Unlimited users, multilanguage interface
- Tree view and search engine
- Books / Projects > Experiments > Pages
- Integrated links to LabCollector data
- Digital signature enabled
- Task time reporting and gantt view
- Historical data / Audit trail
- PDF and printing exports

Fully integrated with
LabCollector LIMS:
a collaborative database for life sciences

Electronic Laboratory Notebook

LabCollector LIMS Add-on

Rich text editor

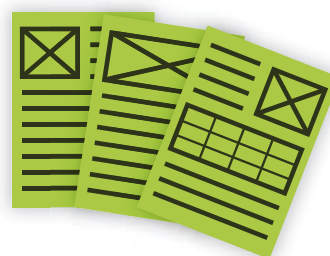

A rich text editor integrated gives an easy experiment reporting on any project level. It includes a versioning crash recovery tool, direct image uploading and Photobank add-on connection. A diagram designer is also integrated.

Customization

In LabCollector ELN you can define specific content models through extensive customization. Configuration does not require any IT knowledge.

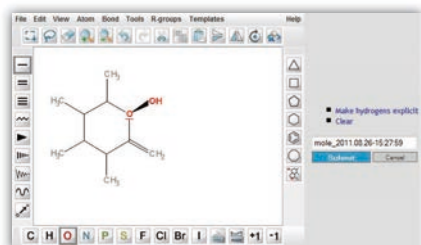

- Experiment workflows
- Page template design
- Custom fields: text, checkbox, list date, data grid
- Spreadsheet templates

21 CFR Part 11 compliance with Electronic Signatures

LabCollector ELN includes an easy to use and totally integrated electronic signature validation system. IT allows data integrity verification based on CFR 21 Part 11 and patents requirements.

The Notebook pages can be signed by both the authors and witnesses. E-signatures give proof of content validity at signature data. Pages versioning is automatic. In addition, a full audit trail is included.

Chemistry plugin

This chemistry option is useful to design chemical structures and reactions or import structures from LabCollector chemistry module.
